

Name: Miss. Rupali Harshad Bhambere

Qualification: MBA in Human Resource

Subject: Environmental Studies (EVS)

Environmental Studies (EVS) plays a crucial role in student life for several reasons: Awareness of Environmental Issues: EVS helps students become aware of important global challenges such as climate change, pollution, deforestation, and sustainability. This knowledge is critical for developing responsible, environmentally-conscious individuals.

Fostering Responsibility: By learning about the environment, students understand the importance of preserving natural resources and reducing their carbon footprint, leading to responsible behaviors both at school and in everyday life.

Critical Thinking and Problem Solving: EVS encourages students to think critically about environmental issues, explore sustainable solutions, and develop problem-solving skills. It prepares them to address real-world challenges creatively.

Holistic Development: EVS is not limited to academics but also focuses on the emotional and ethical aspects of learning, teaching students the value of empathy, community involvement, and stewardship of the planet.

Interdisciplinary Learning: Environmental Studies connects with various subjects like biology, chemistry, geography, and social studies, giving students a comprehensive understanding of how the world works and the interconnectedness of life. Preparation for Future Careers: Understanding environmental science can inspire students to pursue careers in sustainability, conservation, environmental policy, or green technologies, areas of growing importance in the modern job market.

Health and Well-being: Learning about the environment also means understanding the importance of clean air, water, and a healthy ecosystem, which directly impacts students' own well-being and quality of life. Incorporating EVS into student life promotes environmental stewardship, ethical values, and equips students with the knowledge to contribute positively to society and the planet.
